

NEW SMART SANDING SYSTEM 125MM

97105 Kit

The most complete 125mm line available in Europe. This completely dry sanding system (up to and including P3000) is particularly suitable for smaller cars with rounder shapes. With the small, light and easy-to-handle sanding machine, the 125 mm line enables you to sand the (round) car parts quicker and more effective compared to the conventional 152mm sanding system. Also it is **dry sanding**. Compared to conventional systems (that still use water with finer grits), the Kovax 125mm system is cleaner and quicker. Because you see what you have sanded, you will be able to work much more efficiently and sanding through the clear coat is unlikely to happen any longer. The Smart Sanding System is also the first ecological sanding system! Smaller car parts require less sanding material, less electricity and Produce less dust. Apart from the ecological aspect, your **material costs will be reduced as well!** With a **special conversion pad**, you can easily make your 152mm machine suitable for the 125mm sanding system.
